

Suhail

-[Suhail rashidBhat];

iOS

My professional iOS experience consists mainly of the NewsHunt and CricHQ mobile app. The two projects are very complex big projects and successful in the market and growing.

iOS is the most advanced and beautiful mobile OS. I love to work on the technology. I redesigned the NewsHunt iOS app parsed the XML responses and displayed multiple devanagari languages on device.

In CricHQ, I integrated Google Ads in the mobile app. DFP I integrated and made working on app. I also worked on new iOS 7 redesigning of the app UI.

Apart from my usual development, I trained and mentored the new iOS team setup in Chennai office of CricHQ.

C++

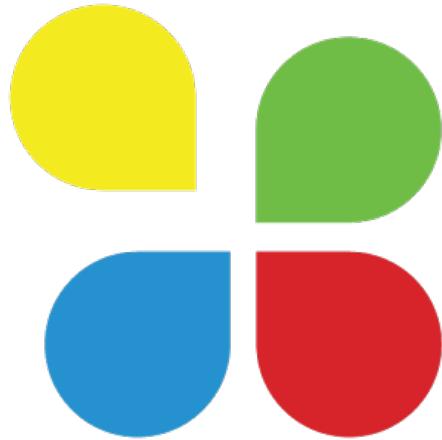

From college days C++ was my favourite language and I get highest scores in the language. Fortunately my first industry project was a mobile application and I started working on Symbian C++. So I got both the fields I like Mobile Development and C++.

Working on Symbian CPP was an awesome experience, It is considered one of the toughest coding language.

I designed Animations and beautiful UI in Symbian. It was challenging and I really enjoyed the time on NewsHunt.

In my second project I got a very challenging task which was not taken by any before. I generated Automatic commentary in a cricket app CricHQ. It was based on ball height position in field and many other attributes. All the logic was put in JSON datasource and parsed in C++.

newshunt

I was part of a reasonably large team dedicated to huge system that powered the NewsHunt Project. During my time under this role I worked on many different aspects. From Symbian 3rd Edition and S60 UI design and animations to iOS app complete redesign and New UI. This project consisted of XML parsing logics based on protocols definition between server and client. I learnt basics and fundamentals of Mobile apps here.

Objective C, IOS4-7, Symbian, Released

CRICHQ

Objective C, IOS4-7, Released

DFP from management of the Ads on the DFP server to the coding and integration in the iOS app was done by me. Google Analytics for the iOS app I was responsible and have been successfully implemented and tracking.

CricHQ has its own extensive testing solutions, with unit and functional testing covering almost 40% of the app.

CricHQ is a growing project. During my tenure here I implemented Automated Commentary generation. The app provides ball by ball commentary. All the logic of the system is put in JSON and parsing in C++ which by wrappers I used to show on the app. Google

C | EH

I had interest in Cyber security and hacking in my college so I choose to be certified ethical hacker.

Apart from C|EH certification from EC-Council USA. I have been in many Information security workshops and seminars.

I even learnt BlackHat and few essential tools for penetration testing.

Its skill worth learning.

Certified Ethical Hacker
